Hotel Booking Pro-Code Extension

Technical Project Implementation & Analytical Evaluation Report

PLATFORM	EXTENSION TYPE	AUTHOR / LEAD	ENVIRONMENT
Zoho Catalyst / Creator	**Pro-Code Custom Widget**	**Vinnarasan J**	**Production Trial**

1. AIM OF THE PROJECT

To design, build, and integrate a custom **Pro-Code Extension** within the Zoho ecosystem using **Zoho Catalyst** and **Zoho Creator**. The primary objective is to extend default low-code functionalities by delivering custom analytical dashboards, dynamic real-time reporting, automated payment classification, loyalty tier segmentations, and room inventory management for a comprehensive Hotel Management System.

2. IMPLEMENTATION PROCEDURE

Step 1: Environment Setup & Catalyst Project Initialization

Initialize a Pro-Code project in Zoho Catalyst CLI using Serverless Functions (Node.js/Java) and Web Components (HTML5/CSS3/JavaScript). Establish microservices for data fetching and API integrations.

Step 2: Schema Definition & Database Architecture

Configure relational database entities in Zoho Creator for *Reservations*, *Transactions*, *Guest Profiles*, *Room Types*, and *Room Inventories* with relational key integrity.

Step 3: Custom Widget & UI Logic Development

Develop high-performance front-end dashboards utilizing custom CSS and dynamic charting libraries to visualize Guest Count vs. Payment Status, Transaction Totals, and Loyalty Tiers.

Step 4: Integration & Extension Deployment

Package the pro-code extension and embed it seamlessly into the Zoho Creator application navigation bar, mapping custom URLs to Catalyst cloud function endpoints.

3. RESULTS & SYSTEM DEMONSTRATION

The deployed Pro-Code Extension was successfully verified. The dashboard aggregates financial KPIs, guest reservation metrics, and booking transaction statuses in real time.

$2,380.00	$1,041.24	89.00	$1,165.00
TOTAL REVENUE	TOTAL AMOUNTS	TOTAL BOOKINGS	BASE PRICES

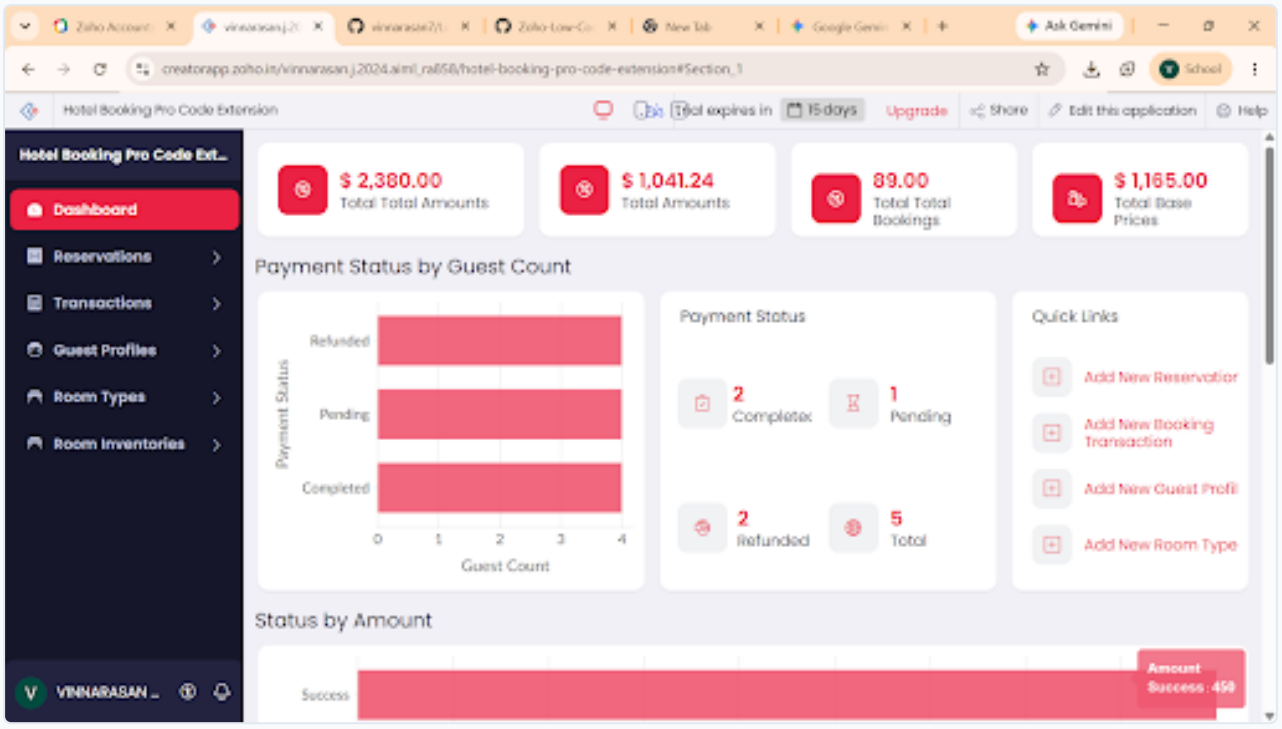

Figure 1: Live Analytics Dashboard displaying KPI Cards, Payment Status by Guest Count, and Quick Links.

Dashboard Insights: The central analytical module visualizes completed vs. pending guest reservations, enabling property administrators to execute quick record updates ("Add New Reservation", "Add New Guest Profile", "Add New Room Type") directly from the pro-code extension interface.

4. MODULE BREAKDOWN & DATA VERIFICATION

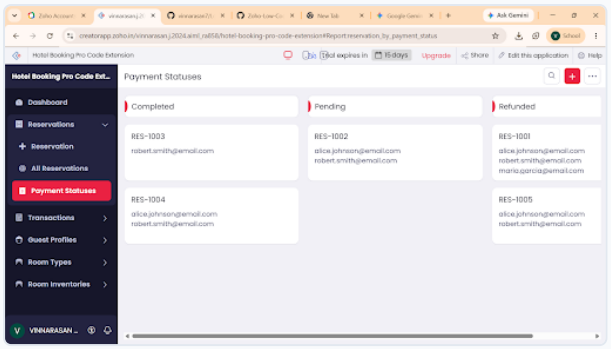

Figure 2: Kanban View of Payment Statuses.

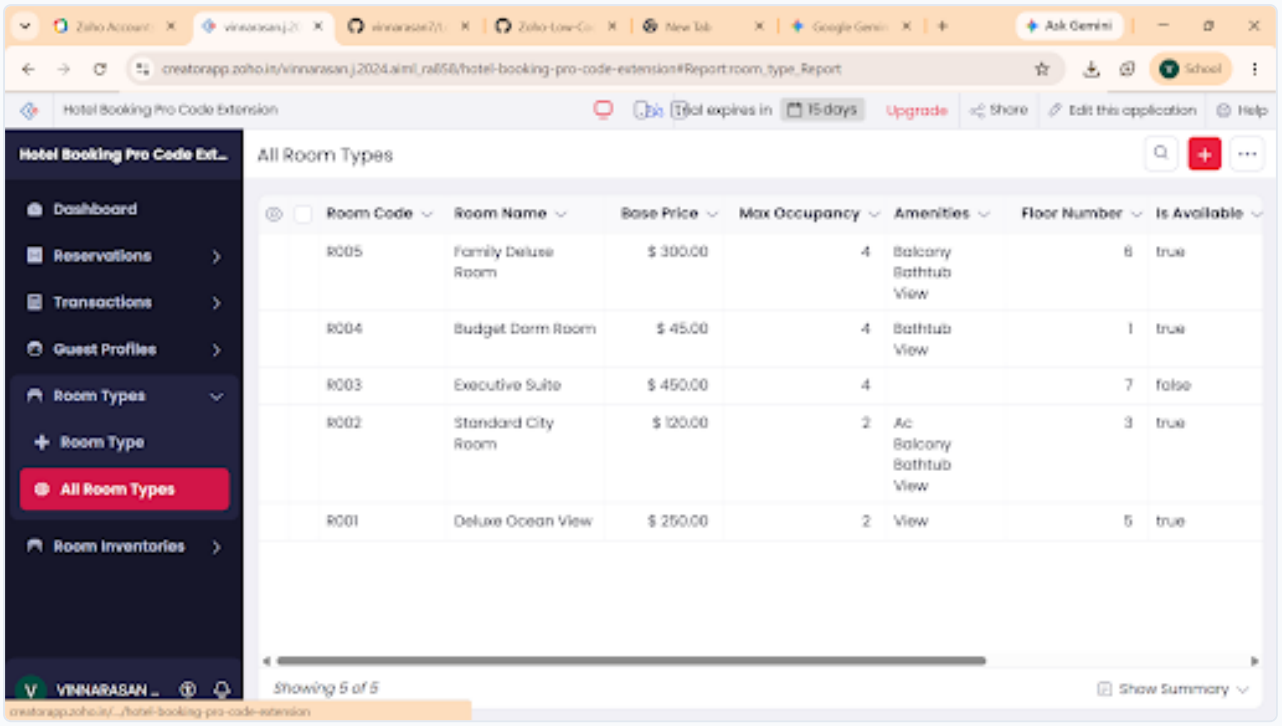

Figure 4: Detailed Room Inventory & Amenities Configuration Matrix.

5. ROOM CATEGORY & OCCUPANCY SUMMARY

Code	Room Name	Base Price	Max Occupancy	Floor	Availability
R005	Family Deluxe Room	$300.00	4 Guests	Floor 6	True
R004	Budget Dorm Room	$45.00	4 Guests	Floor 1	True
R003	Executive Suite	$450.00	4 Guests	Floor 7	False
R002	Standard City Room	$120.00	2 Guests	Floor 3	True

6. CONCLUSION
