Zoho Creator Setup and Platform Exploration

Aim

To explore the Zoho Creator platform and understand how to set up an application, create forms, manage data, and build a simple application using its low-code development features.

Procedure

1. Open the Zoho Creator website and sign in using a Zoho account.
2. Explore the Zoho Creator dashboard and its available features.
3. Create a new application using the application creation option.
4. Design forms to collect user information by adding fields such as text boxes, numbers, dates, and dropdowns.
5. Create reports to view, organize, and analyze the collected data.
6. Configure workflows and actions to automate tasks when required.
7. Enter sample data and test the application.
8. Verify that forms, reports, and workflows function correctly.

Result

Successfully explored the Zoho Creator platform and learned the basic steps to create an application, design forms, manage data through reports, and understand workflow automation.
