Data Modelling and Form Design

Aim

To design and develop a Hotel Booking Application Form using Zoho Creator by creating a structured form, applying appropriate validations, and generating a report for managing hotel booking requests.

Theory

Data modelling and form design involve organizing information into suitable fields and sections for efficient collection and management. In Zoho Creator, forms can be created using different field types such as Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.

In this application, a Hotel_Booking_Form is designed to collect guest identity, contact information, booking details, room requirements, number of guests, special requests, and booking confirmation. The form is divided into logical sections: Guest Details, Contact Details, Stay Details, Room & Guest Details, and Booking Confirmation.

Validations are applied to ensure accurate data entry, including mandatory fields, valid email and phone formats, valid check-in and check-out dates, positive guest values, and compulsory booking confirmation. The submitted data is displayed in the Hotel_Booking_Report for review and booking management.

Procedure

1. Open Zoho Creator and create the Hotel Booking Management application.
2. Create the Hotel_Booking_Form.
3. Add the required fields for guest, contact, stay, room, guest-count, and confirmation details.
4. Organize the fields into the specified logical sections.
5. Configure mandatory fields and apply the required validation rules.
6. Save and preview the form in live/user mode.
7. Enter sample guest and booking details and submit the form.
8. Create/open the Hotel_Booking_Report and verify the submitted record.
9. Review the submitted booking record in the Hotel_Booking_Report and verify the stored information.
10. Configure the successful form submission workflow to send a booking acknowledgement email to the guest.

Result

The Hotel Booking Application was successfully created in Zoho Creator with a structured data model, appropriate field validations, and organized sections. The submitted booking information was successfully stored and displayed in the Hotel_Booking_Report for effective review and management. The successful form submission workflow was also configured to send an acknowledgement email to the guest.
