REPORTS, DASHBOARDS, AND UI BUILDER

Practical Implementation Report — Hotel Booking Management System

EXPERIMENT	PLATFORM	FOCUS AREAS
Reports & Dashboard UI	Low-Code / Zoho Creator	KPI Metrics, Kanban & Grids

1. Aim

To design and construct interactive reporting modules, real-time analytics dashboards, and custom user interface layouts using UI Builder tools for a Hotel Booking Management System.

2. Procedure

1. **Dashboard Layout Configuration:** Built a main dashboard utilizing KPI cards ($2,850.00 Total Amounts, $108.54 Total Tax Amounts, $1,085.49 Total Amount Paid, $976.94 Subtotal) to monitor core financial metrics at a glance.
2. **Status Tracker & Visual Charts:** Configured status cards tracking Checked-In (1), Confirmed (1), Cancelled (2), and Checked-Out (1) reservations, alongside scatter plot visual charts mapping room capacities and subtotal trends.
3. **Tabular Report & Payment Status Mapping:** Created master tabular reports (e.g., *All Payment Records*) featuring color-coded status pills (Cash, Credit Card, Debit Card) and transaction logs.
4. **Kanban & Profile Grid View Builder:** Built grouped card layouts for room inventories by room type (Suite, Single, Deluxe) and structured tabular reports for guest profiles.

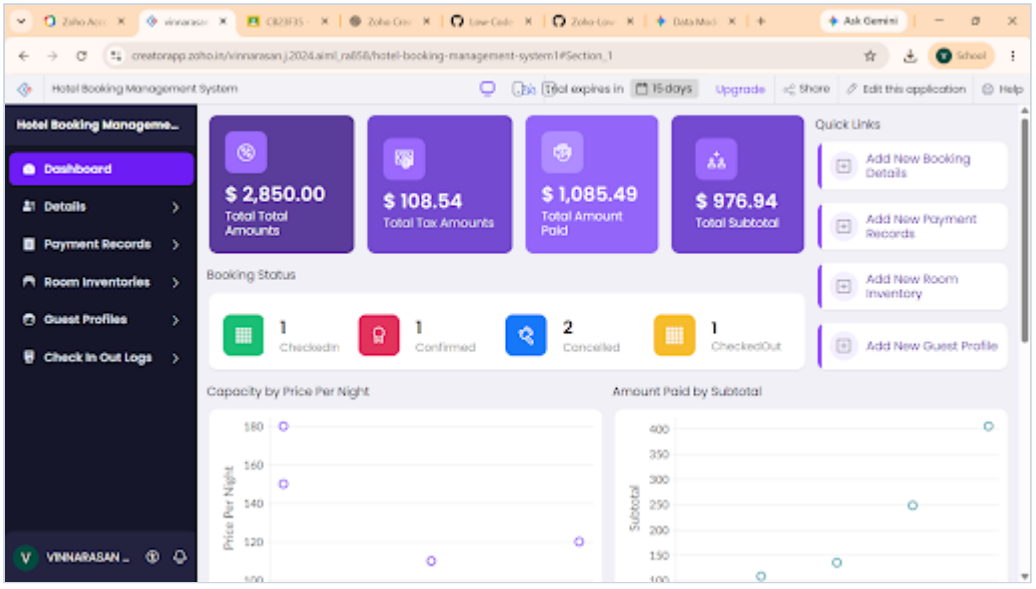

Figure 1: Main Dashboard displaying key financial KPIs, booking status metrics, quick action links, and visual trend charts.

3. UI Builder & Custom Report Layouts

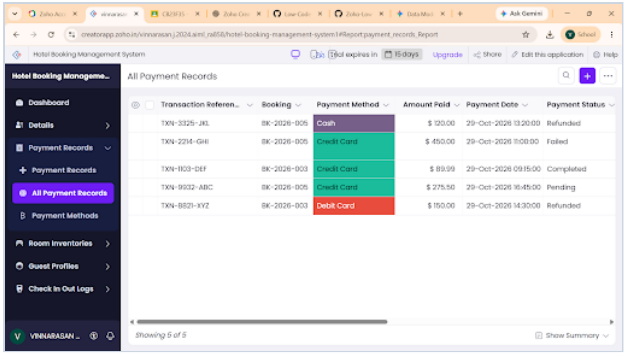

Figure 2: Master Tabular Report listing all payment transactions with method highlighting and status tags.

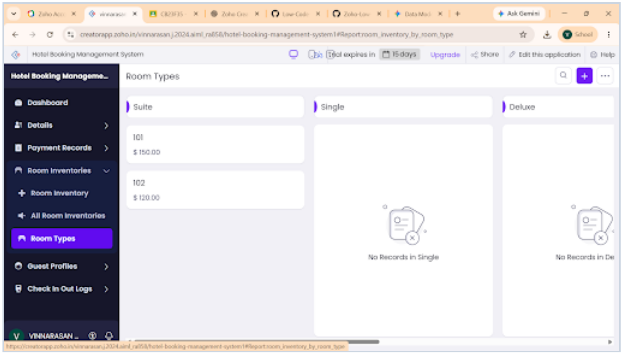

Figure 3: Kanban UI layout categorizing room inventory under Suite, Single, and Deluxe categories.

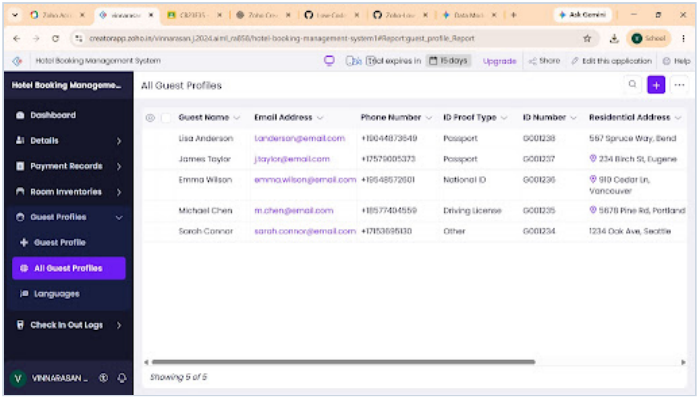

Figure 4: Guest Profiles grid report displaying contact details, ID proof types, and residential addresses.

4. Result

The **Reports, Dashboards, and UI Builder** components were successfully developed for the Hotel Booking Management System. Key achievements include:

Real-Time Analytical Dashboard

Provided operational clarity through financial aggregate KPI cards, booking status counters, and dynamic scatter charts.

Multi-Format UI Reports

Designed tabular payment logs, categorized room inventory Kanban boards, and structured guest profile views for seamless data access.
